MATEO GARCIA RODRIGUEZ

WEB DEVELOPER

Bucaramanga - 3008627344 - mateogarcia13.mg@gmail.com

PROFESSIONAL SUMMARY

I am a programmer with 3 years of experience creating web applications and digital tools that help improve the internal processes of companies. I focus on understanding the real needs of the business to develop functional, clear, and effective solutions. I have worked on systems like budget management platforms and purchase order systems, collaborating with different teams to make sure each tool is useful, practical, and easy to use.

SKILLS

Programming: Experience in developing functional and scalable web applications.

Back-End: Building server logic, APIs, and managing databases.

HTML & CSS: Strong skills in creating responsive web page structure and style.

APIs RESTful: Designing, using, and integrating efficient web services.

Full-Stack: Experience on both the client side and the server side.

Teamwork: Collaboration in projects with agile methods and good communication.

Front-End: Creating interactive interfaces with HTML, CSS, and JavaScript.

JavaScript: Solid knowledge to create dynamic features in the browser.

Version control with Git: Tracking and managing changes in collaborative projects.

Database management: Modeling, queries, and optimization with MySQL / PostgreSQL.

Problem solving: Ability to analyze, debug, and propose effective solutions.

API integration: Connecting with external services to add more features.

Software Developer Level III, 08/2022 - Current
Fábrica De Tecnología (Conectera) – Bucaramanga

- Developing and maintaining web applications using PHP with the CodeIgniter framework.

- Active participation in teams with an agile approach, using Git for version control and effective collaboration.

- Support in developing and implementing a custom system for managing budgets and purchase orders, integrating modules for creating, editing, and tracking requests and approvals.

- Integration of RESTful APIs and management of MySQL databases, ensuring performance and data integrity.

- Implementation of features on both the frontend and backend, using JavaScript, HTML, and CSS to provide an intuitive and dynamic user experience
.

- Constant focus on solving technical problems and continuously improving the system.

- Close collaboration with other areas to adapt the system to the real needs of the business.
